**About Eco Preserve**

- Sustainability consulting firm, two main service lines:
    - **Roots:** green building certifications (LEED, WELL, Living Building Challenge, Guiding Principles) — steady, predictable, ~half of revenue
    - **Branches:** custom projects (fleet electrification, waste diversion, city-wide carbon footprints) — specialized, client-specific

**Pain Point 1: Documentation and File Management**

- Documentation packages for certifications are highly manual
- No consistent naming conventions or folder structure across the team
    - Each project manager (Elise, Mark, Lois) names files differently
    - Same document type gets different names project to project
- Goal: a standardized “Eco Preserve formula” for file naming and organization
- Next step: gain NDA-gated access to one sample project to assess depth and structure

**Pain Point 2: Sustainability Impact Reporting**

- Custom projects often remain at the planning stage; actual impact goes unmeasured
- No consistent way to quantify or communicate environmental outcomes (carbon, water, waste, energy)
- Goal: define impact metrics per project, then aggregate annually for client and partner reporting
- Approach: start with one project, build a replicable formula, then roll up into a company-wide story

**Pain Point 3: AI-Enabled Client Services**

- Current AI use is internal only: faster research, sharper documents, better efficiency
- No AI-facing product or tool for clients
- Goal: identify potential AI-powered services clients could use independently via Eco Preserve
- Not asking the team to build it: looking for direction on what’s feasible, then explore a prototype

**Logistics and Next Steps**

- NDA to be sent after this meeting; team asked to sign and return this week
- SharePoint folder to be created for secure document sharing (four-person access only)
- Weekly check-ins on Wednesdays at 3pm; week of the 28th resumes after Green Build conference in NYC
- **Sign and return the NDA** (Ryan)
    - Required before gaining access to sample project documentation in SharePoint.

- **Set up recurring Wednesday 3pm meeting invite** (Ryan)
    - Add all group members (Jillian and Xavier); skip the week of the Green Build conference in NYC, resume on the 28th.
- **Share email addresses with Eco Preserve contact** (Ryan)
    - Jillian and Xavier to be added to the same communication chain for shared visibility.
- **Prepare brainstormed ideas for next week's check-in** (Ryan)
    - Review the three pain points and come back with initial AI-related ideas and questions.
